

HOMEWORK: HOMEWORK 1.1

Install MongoDB on your computer and run it on the standard port.

Download the hw1-1.zip from Download Handout link and uncompress the file.

Change directory into hw1

Use mongorestore to restore the dump into your running mongod. Do this by opening a terminal window (mac) or cmd window (windows) and navigating to the directory so that the dump directory is directly beneath you. Now type:

```
mongorestore dump
```

Note you will need to have your path setup correctly to find mongorestore.

Now, using the Mongo shell, perform a `findOne` on the collection called `hw1_1` in the database `m101`. That will return one document. Please provide the value corresponding to the "answer" key (without the surrounding quotes) from the document returned.

```
1 Hello from MongoDB!
```

SHOW ANSWER

Submission deadline has passed.
