

HOMEWORK: HOMEWORK 1.2

Your assignment for this part of the homework is to install the mongodb driver for Node.js and run the test application. To do this, first download the hw1-2.zip from Download Handout link, uncompress and change into the `hw1-2` directory:

```
cd hw1-2
```

Use mongorestore to restore the dump into your running mongod. Do this by opening a terminal window (mac) or cmd window (windows) and navigating to the directory so that the dump directory is directly beneath you. Now type:

```
mongorestore dump
```

Note you will need to have your path setup correctly to find mongorestore.

Then install the mongodb driver:

```
npm install mongodb
```

This should create a "node_modules" directory. Now run the application to get the answer to hw1-2:

```
node app.js
```

If you have the mongodb driver installed correctly, this will print out the message 'Answer: ' followed by some additional text. Write that text in the text box below.
