

## FINAL: QUESTION 6

Which of these statements is true?

**Note:** to get a multiple answer question right in this final you must get all the components right, so even if some parts are simple, take your time.

- ☐ MongoDB (v3.0) supports transactions spanning multiple documents, if those documents all reside on the same shard.
- ☐ MongoDB supports atomic operations on individual documents.
- ☐ MongoDB allows you to choose the storage engine separately for each collection on your mongod.
- ☐ MongoDB has a data type for binary data.
