

FINAL: QUESTION 4

Keep the three member replica set from the above problems running. We've had a request to make the third member never eligible to be primary. (The member should still be visible as a secondary.)

Reconfigure the replica set so that the third member can never be primary. Then run:

```
$ mongo --shell a.js --port 27003
```

And run:

```
> part4()
```

And enter the result in the text box below (with no spaces or line feeds just the exact value returned).
