ANSWER NOTES

This problem has been changed slightly from the original that Dwight was working from, so it now has an arbiter (previously, it used 3 full members). You'll see the difference in `rs.conf()`, when it will probably be (for you):

```
{
  "_id" : "z",
  "version" : 2,
  "members" : [
    {
      "_id" : 1,
      "host" : "localhost:27001"
    },
    {
      "_id" : 2,
      "host" : "localhost:27002",
      "arbiterOnly" : true
    },
    {
      "_id" : 3,
      "host" : "localhost:27003",
      "priority" : 0
    }
  ]
}
```

```
}
```

Other than this, though, the answer remains completely correct.
