HOMEWORK: HOMEWORK 1.3

At this point you should have pcat.products loaded from the previous step. You can confirm this by running in the shell:

```
> db.products.find()
> // or:
> db.products.count()
> // should print out "11"
```

Now, what query would you run to get all the products where brand equals the string "ACME"?

```
1 db.products.find({"brand":"ACME"})
```
