HOMEWORK: HOMEWORK 2.2

Add a new product to the products collection of this form:

```
{
        "_id" : "ac9",
        "name" : "AC9 Phone",
        "brand" : "ACME",
        "type" : "phone",
        "price" : 333,
        "warranty_years" : 0.25,
        "available" : true
}
```

Note: in general because of the automatic line continuation in the shell, you can cut/paste in the above and shouldn't have to type it all out. Just enclose it in the proper statement(s) to get it added.

Next, load into a shell variable the object corresponding to

```
_id : ObjectId("507d95d5719dbef170f15c00")
```

- Then change `term_years` to 3 for that document. (And save that to the database.)

- Then change `over_rate` for `sms` in `limits` to 0.01 from 0. Save that too.

At the shell prompt type:

```
homework.b()
```

What is the output?
